CASTWOMAN: *Breaking stereotypes of women roles in foundry sector and awake their interest by Key Enabling Technologies from a gender inclusive perspective*

CASTWOMAN project aims to contribute to reduce the gender gap in the foundry industry, by highlighting female role models in this professional field and raise awareness among female VET trainees to approach and mobilize the skills and competencies related to KETs to respond the demands to the new century foundries.

The last meeting of the project took place on June 29th and 30th, online, where an overview of the project was made and the work to be finished was defined.

The main expected result is to develop a multimedia training platform to provide place and tools to introducing VET female students to non-traditional foundry job paths, fostering the gender-inclusion. The platform is aimed as a tool to empower young women and exploring the range of skills that are needed for a great variety of jobs within the foundry sector, especially those linked to the technologies 4.0.

Co-funded by the
Erasmus+ Programme
of the European Union 

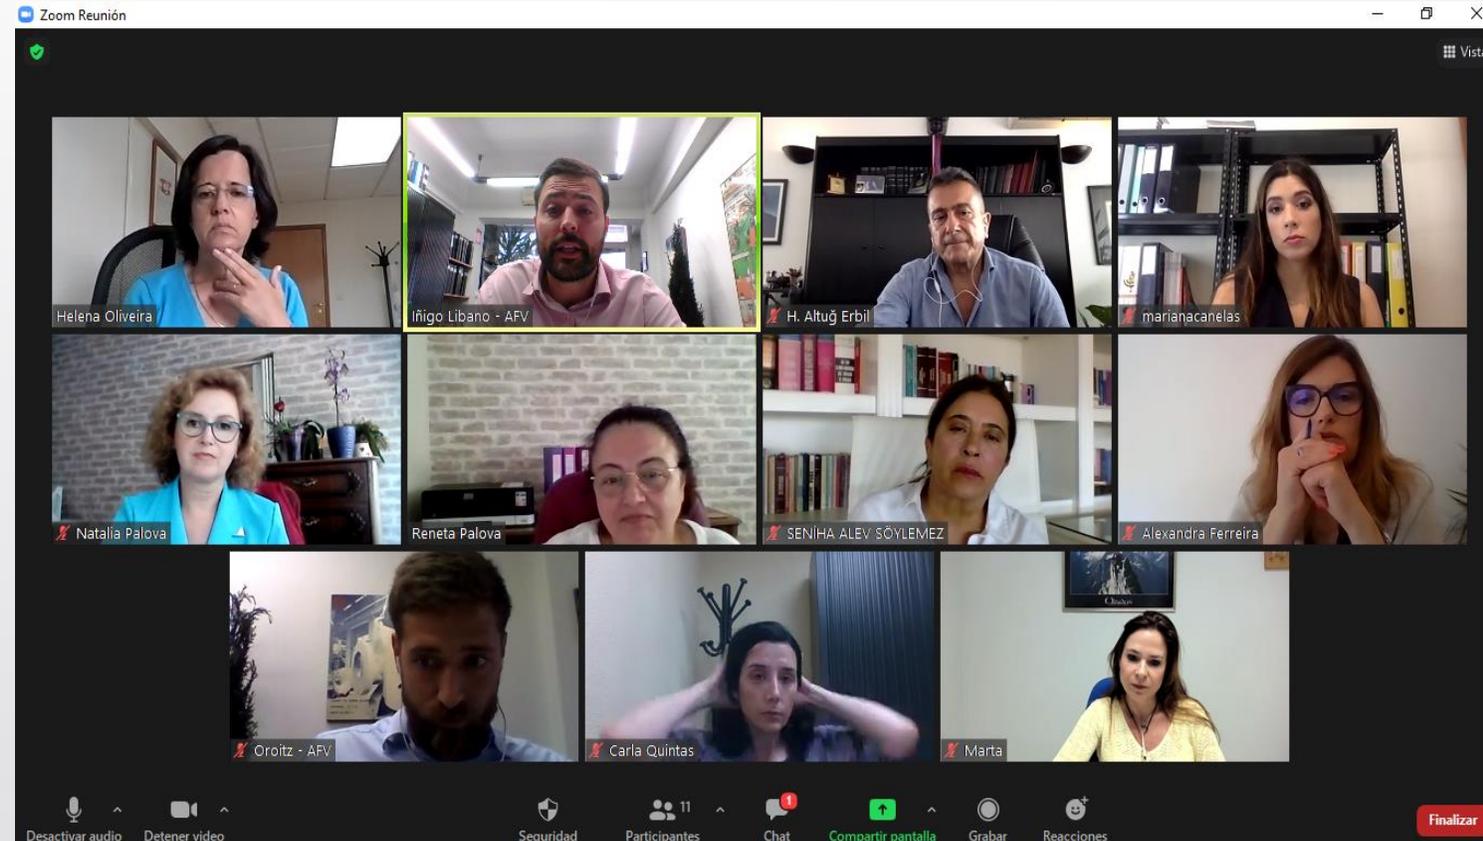

Topics discussed at the last project meeting :

Pilot testing of Castwoman products: the results of the pilot tests were analyzed and considered appropriate. 45 VET trainers explored and assessed the role models and the digital toolkit and shared their comments with us.

Multiplier events: the strategy to implement the local multiplier events was stated. Three national events will be held in Bilbao, Porto and Ankara.

Assessment: the quality evaluation of the different phases of the project were analyzed.

Dissemination: a plan to improve dissemination in this last period of the project was established. The project finishes at the end of September 2021.
